Project Description:

The E-commerce: Shoe Store is a web application that provides the user to watch various shoes according to the categories like running, best performance shoes, etc. It allow users to move their shoes to the cart and accordingly shows how much items are their in there cart and shows price as well. Contains bootstrap items like carousels, cards, etc which can be helpful for and can be used to learn new things for future references.

Technical Architecture:

Project Objectives:

By the end of this project, you will:

- Create a user interface using HTML and CSS to display information about e-commerce product of shoes.

- Dynamically update the UI with the fetched shoes data which is coming from data present in script file.

- Allow users to add shoes in cart and can get how many shoes they have send to the cart.
